Alexander Leonard

AI Enablement and Operations Associate

Adairsville, GA | +1 762 288 4046 | unityinix@gmail.com

Professional summary

Operations professional transitioning into AI enablement, with experience supporting safe, efficient industrial workflows and current study in AI Engineering. Built Merlin, a mitochondrial DNA research project using a structured six-path methodology. Contributed a C bug fix to the GNU Emacs syntax engine. Brings practical AI and programming interest, equipment operations experience, and a focus on responsible process improvement.

Work experience

Open Source Contributor — GNU Emacs
August 2026

- Diagnosed a fatal assertion failure (SINGLE_BYTE_CHAR_P) in the Emacs syntax engine: calling syntax-class with a multibyte character while the current buffer was unibyte aborted the editor.
- Traced the crash path through package.el and org-mode's syntax-table handling; filed upstream bug #81723 with a minimal reproducer.
- Wrote a C patch for src/syntax.c (char-syntax) that resolves multibyte characters through their syntax descriptor before any single-byte table lookup; shipped as a fix package with an elisp-level workaround and usage docs.
- Reported a related input-delay issue with elisp-fontify-semantically, including CPU and memory profiler data.

Front Wheel Loader Operator
Ready Mix USA
2023 to Present

- Operated front wheel loaders and forklifts in a fast-paced industrial environment.
- Followed safety procedures while handling materials and supporting daily operations.
- Coordinated with team members to maintain efficient material flow and workflow continuity.
- Used mechanical aptitude and equipment knowledge to support reliable operations.

Independent Research Project Developer
Merlin

- Developed Merlin, a mitochondrial DNA research project using a six-path methodology.
- Organized research questions and analysis stages into a repeatable study framework.

- Applied structured workflows to support systematic interpretation of research findings.
- Documented project work in a GitHub portfolio for review and continued development.
